

Announcements

■ Only a few announcements:

- Welcome Wonder CA Chase Basich, who is covering lecture today during my absence.
- Assignment 1 will be graded by Sunday afternoon, grade reports emailed out soon thereafter.
- Assignment 2 is slightly more intense than Assignment 1, so start earlier than later.

■ Topics for today:

- Continue our discussion of **fork**, how to use it, and how it works.
 - Refer to this past Wednesday's slides two of today's examples, and hopefully everything goes swimmingly well with those and we can advance on to those posted today.
 - With any luck, you'll understand how a standard UNIX shell works by middle of next week. Great stuff, this **fork**.
 - Sync up against **/usr/class/cs110/lecture-examples/spring-2017** to get the examples from this past Monday's and today's lectures.
